AREAS	Data Science / AI, Data Analytics, Data Engineering, SW Engineering
LOCATION	Hamburg or Stuttgart, Germany. Remote possible with references.
START DATE	September 2022 onwards. We are hiring on a rolling basis!

About Blockbrain

WHO
Blockbrain is a global early-stage startup building a community-driven analytics platform for **reliable investment information** in **Web3** and **the Metaverse**. Our team consists of unicorn founders, crypto experts, and tech ninjas who all believe that **blockchain technology** will drive one of the biggest cultural and business revolutions since the internet adoption.

WHY
While many investors seek exposure to this new internet era through NFTs and cryptocurrencies, the market is currently a very **dangerous** landmine. Information overload, fragmented ecosystems, no credible sources – dissatisfied with the status quo where **scammers** have the upper hand, we decided to build Blockbrain.

HOW
Our mission is to become the **safe gateway to Web3 investments**. Blockbrain will facilitate the mass adoption of Web2 users in the coming years by building a bridge of **trustworthy information** to the Web3 and DeFi ecosystem.

WHAT
We utilise the power of data, AI, and our investment community to help users discover opportunities, avoid scams, and make successful investment decisions with ease. Crypto, NFTs, virtual real estate - **we dig up gems and expose scams**!

Your Role

We are looking for aspiring entrepreneurs who want to support our rapidly growing operations into a **leading Web3 brand**. As part of your **tech internship**, you will have access to our data treasure and further extend it and work with cutting edge technologies in an innovative industry with tons of career opportunities.

Responsibilities

Your responsibilities will depend on your background and interests, but all of our interns will get exposure to a number of areas. Some of them include:
BI and Data Analytics
Working with a huge data set containing all OpenSea data (sales, listings, collections, assets, ...) and transaction history of an unlimited number of wallets, you will create actionable insights and visualize them in Dashboards (using Metabase and Grafana) or setting up alert mechanisms.

Social Media Monitoring & web scraping
Using public APIs, news data, social media monitoring tools and web scraping libraries you will enrich our DeFi & NFT data treasure by further insightful data and knowledge items. Using NLP libraries you will create insights on unstructured text data from those sources.

Your Profile

You are a **university studen**t driven to bring Blockbrain to the next level with availability for **at least 3 months, 6 month is prefered** (Pflicht-praktikum). You love challenging the status quo, taking on full ownership for your projects, and contributing to a broader mission!

- Ambitious - You set high goals and have a proven ability to achieve them
- Courageous - Willing to present new ideas, experiment, and learn
- Pragmatic - You have a bias for action and execute fast
- Technical - e.g. experience in SQL, APIs, BI tools, Python, ...
- Data-Driven - Affinity to data, analytical mind

Previous experience in a fast-paced environment (startup, consulting, VC, IB, etc.) is a big bonus. For all the profiles we are looking for, a **genuine interest** in advancing and democratizing the Web3 ecosystem is expected.

What we offer

Top-performing candidates have the chance to receive a full-time offer upon successful completion of the internship.

- **Impact** - Fast-growing startup with responsibility from day one
- **Growth** - Work with successful serial founders and experienced managers
- **Culture** - A flat hierarchy with constant feedback loops
- **Data treasure** - Work with a huge Ethereum & OpenSea data treasure
- **Fun** - A fun & global environment with regular team events
- **Rewards** - Fair compensation
